Over 1500 new LEDWash 800s Available in Germany

Products Involved

LEDWash 800™

Robe's amazing LEDWash series continues to break new ground and set more records as a best-selling product!

The German market – consistently one of the strongest in Europe for ROBE – sees German distributor LMP announcing orders for over 1500 units of Robe's LEDWash 800!

Three of the largest dry-hire companies in Germany – Motion Light from Fürth, Conrad Licht & Rigging Support from Bergkirchen in the Hafenstrasse and Dortmund based NicLen – have all placed their orders with LMP for LEDWash 800s.

Together they will take over 1500 units, which will be readily available for designers and production companies wanting to use them on their shows and events.

The ROBIN 800 LEDWash was originally manufactured as a special request and soon became an additional production model – added to the 300, 600 and 1200 models in this phenomenally successful range.

The LEDWash 800 further reinforced Robe as the brand offering the very best LED wash fixtures currently on the market!

The enhanced LEDWash 800 fixture utilises Robe's patented system to produce seamless and smooth zooming between 8 and 63 degrees and high clarity RGBW multichip output.

Brighter LED chips and a removable beam shaper module with motorized rotation create a perfect combination for theatre, TV or live work ... and all other professional applications.

All three companies have also just confirmed orders for Robe's brand new ROBIN Pointe luminaire, large quantities of which are now available in Bergkirchen close to Munich, Fürth in the south of Germany and Dortmund in the centre of the country.

All these companies are expanding their already large stocks of Robe equipment with investment in these two models of light based on a high demand from the rental market, their regular appearance on technical riders and the excellent experiences they have had from a rental perspective, where reliability and quality are key.
